Azure Sales Data Pipeline
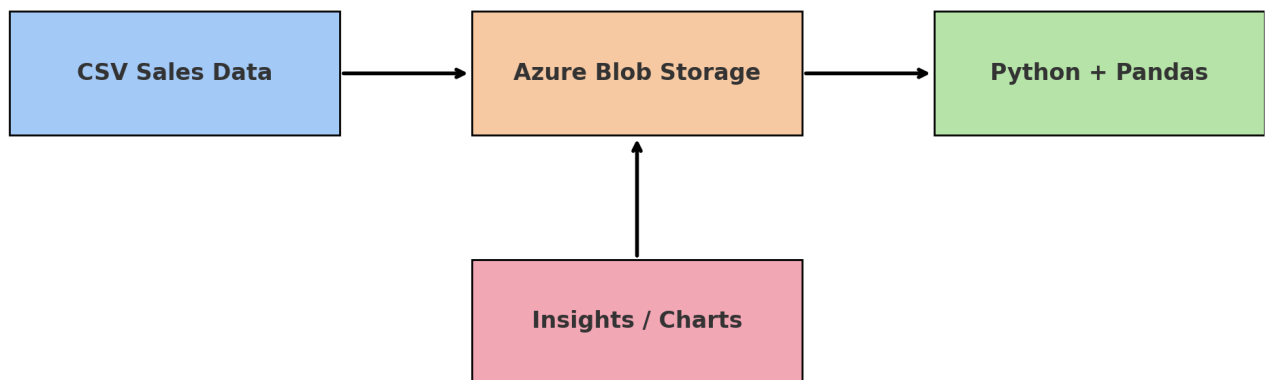

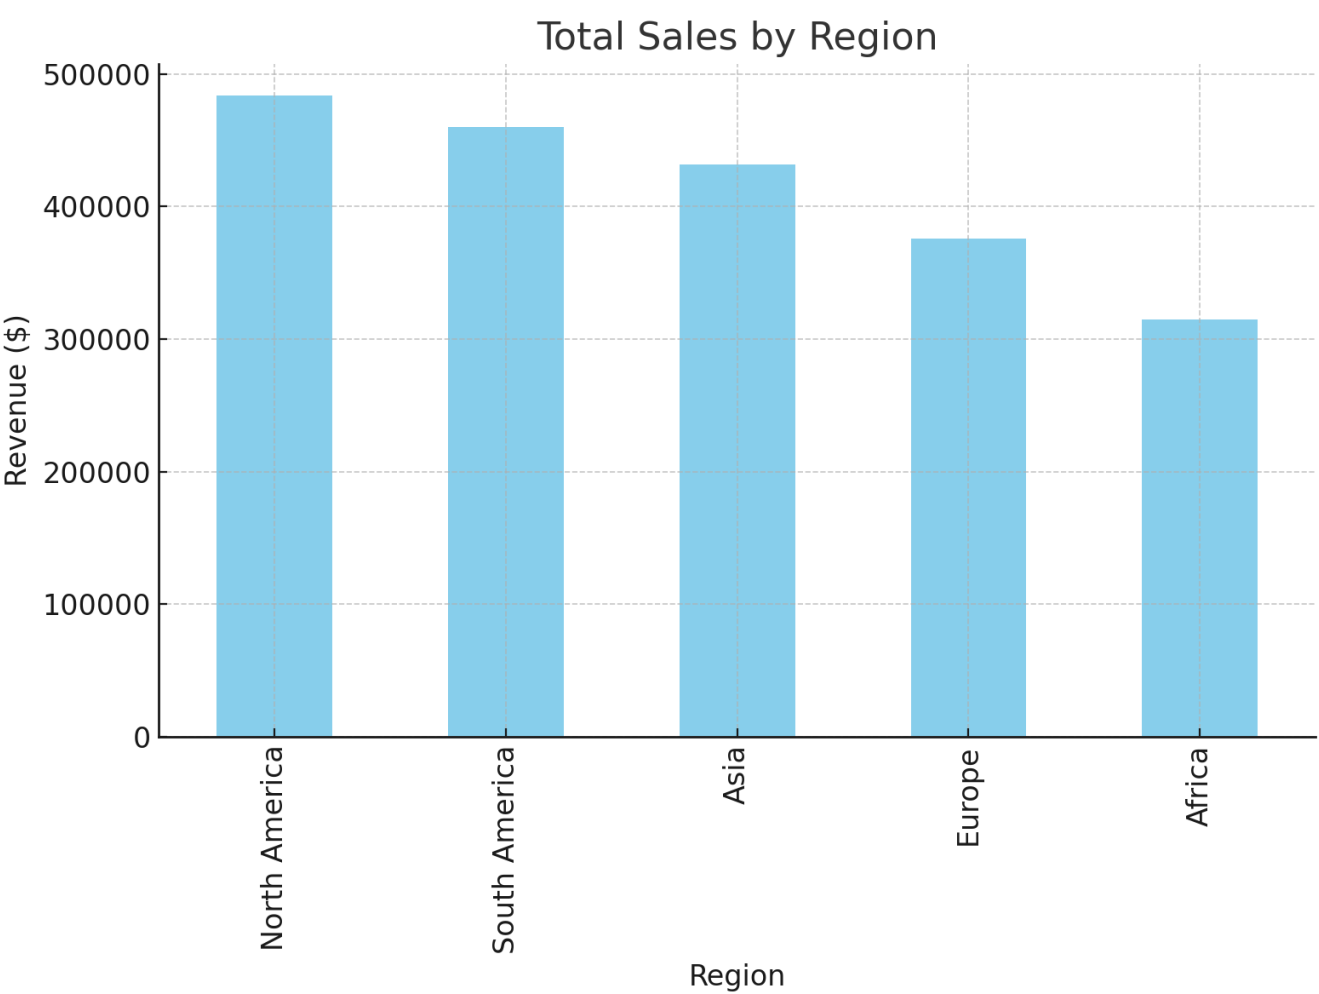

End-to-End Data Ingestion and Analytics with Azure Blob Storage & Python.

Azure Sales Data Pipeline Architecture

CSV Sales Data	→	Azure Blob Storage	→	Python + Pandas

Insights / Charts → Azure Blob Storage
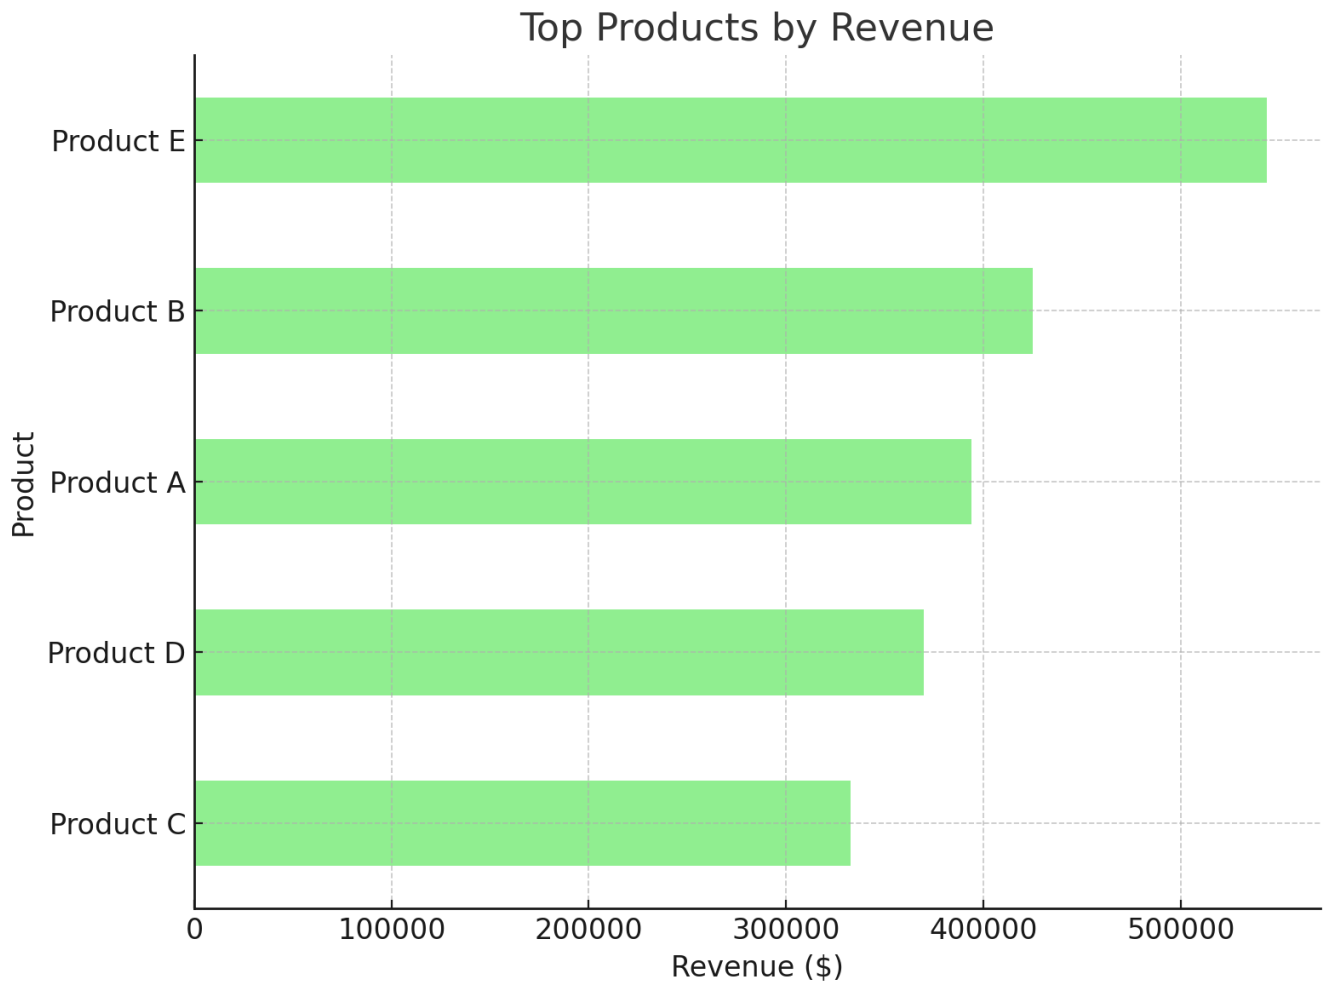

Sales by Region

Total Sales by Region

Insight: North America leads sales, followed by Europe.

Regional breakdown helps businesses target growth opportunities.
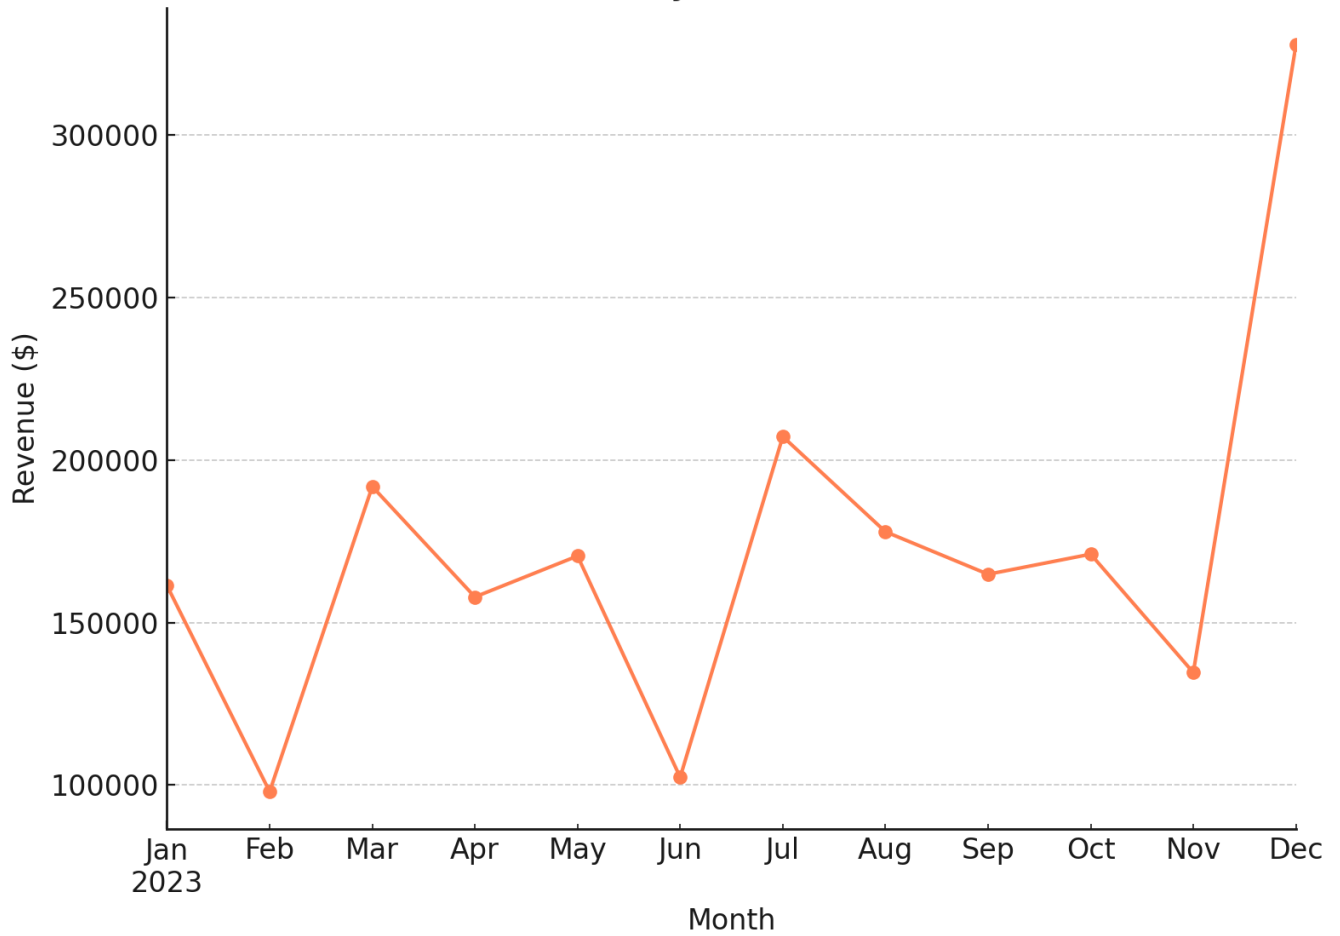

Top Products by Revenue

Insight: Product A and Product B generate the highest revenues.

This analysis helps prioritize product strategy and marketing.
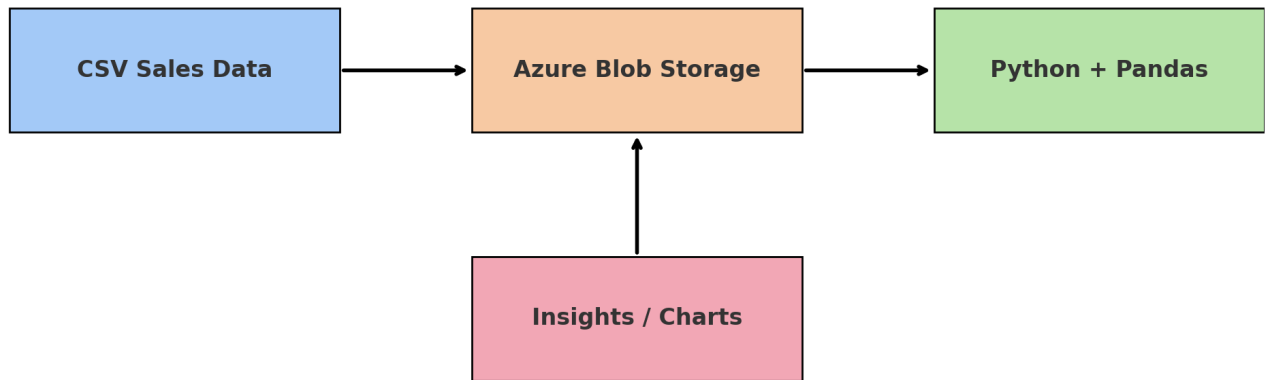

Monthly Sales Trend

Monthly Sales Trend

Insight: Sales show seasonal patterns with peaks in certain months.

This trend can support forecasting and demand planning.

Conclusion

Azure Sales Data Pipeline Architecture

```

└──────────────────┘      └──────────────────┘      └──────────────────┘
                                    ▲
                                    │
                          ┌──────────────────┐
                          │                  │
                          │  Insights / Charts│
                          │                  │
                          └──────────────────┘
```

Takeaway: By combining Azure Blob Storage with Python, sales data can be ingested, processed, and analyzed efficiently.

This pipeline lays the foundation for automated dashboards, reporting, and even advanced analytics.

Question: Which part of the pipeline do you think is most critical for scaling?
